

Wisconsin Traffic Operations Infrastructure Plan (TOIP)

Potential Cultural Resources

August 28, 2009

This listing is the result of a preliminary evaluation of over 550 individual sites on all 14 priority and emerging priority corridors to determine if archaeological sites or structures may be present within approximately 100 feet of a device tag location (refer to corridor and metro node maps). Additional archaeological and/or architectural investigations of the tag locations should be considered prior to beginning construction and deployment of these facilities. ITS device location is generally easily adjustable to avoid impacting cultural or environmental resources.
