

Connected and Automated Vehicles- **What's new and Where are we going?**

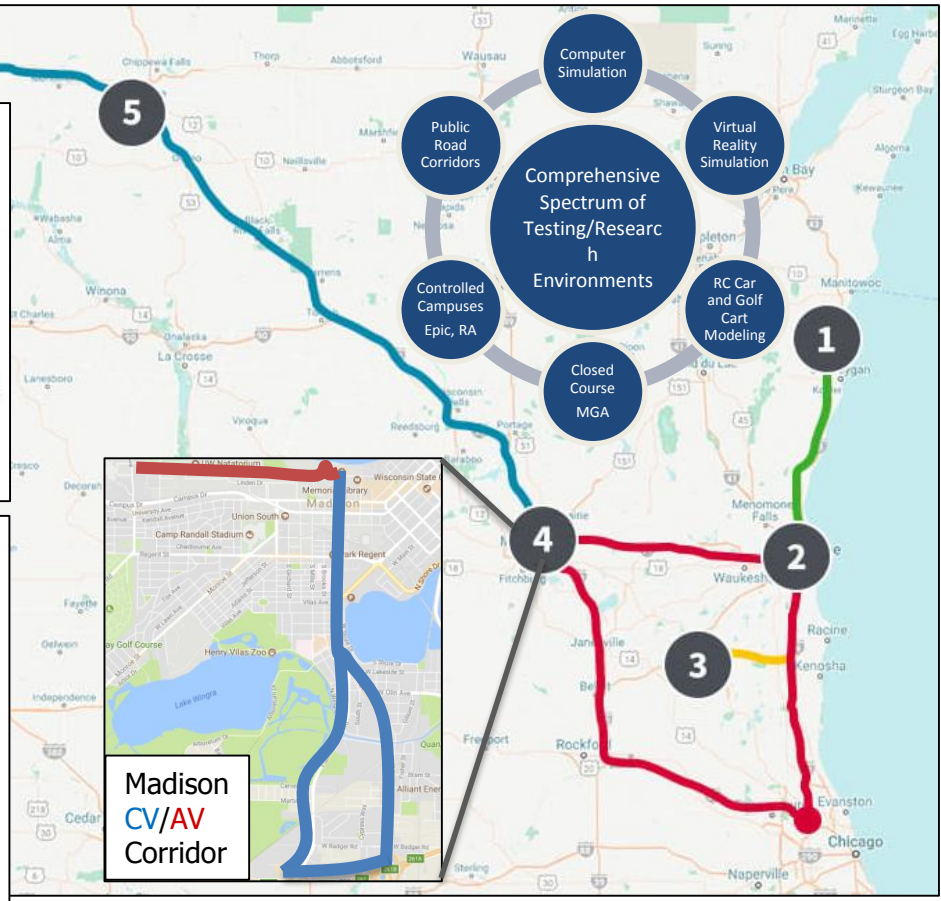

Andrea R. Bill

WISCONSIN AUTOMATED VEHICLE PROVING GROUNDS

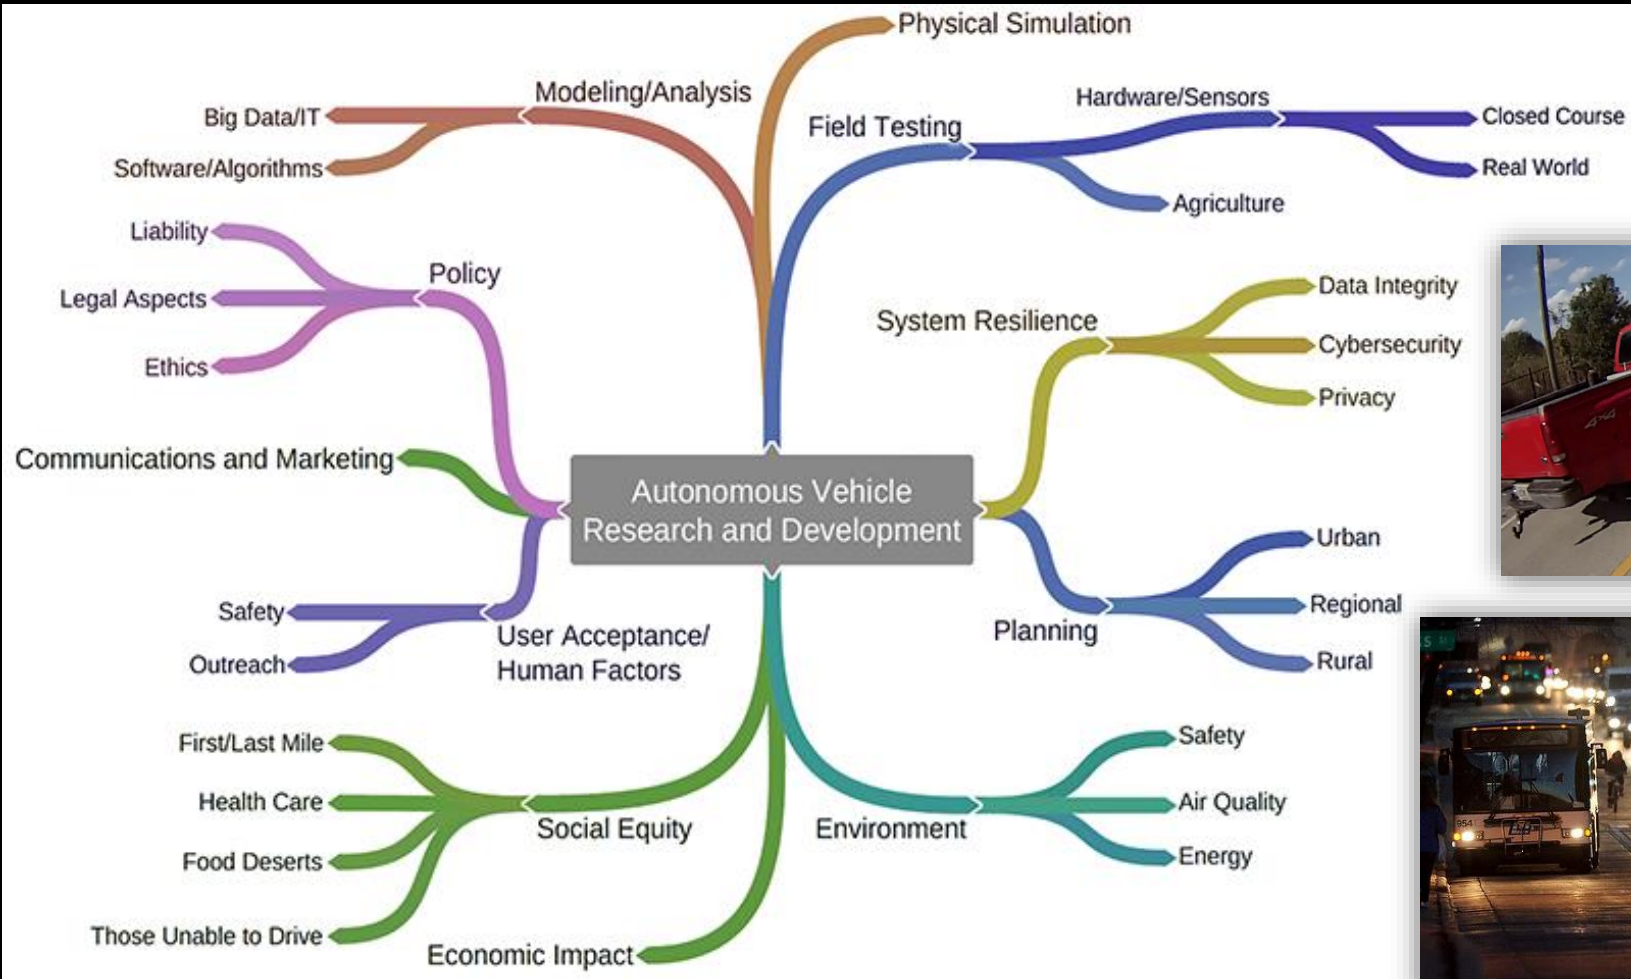

- TESTING FACILITIES**
- ROAD AMERICA**
Elkhart Lake, WI
 - MILWAUKEE AREA FACILITIES**
City of Milwaukee and UW-Milwaukee
 - MGA RESEARCH GROUP**
Burlington, WI
 - MADISON AREA FACILITIES**
City of Madison, Epic, Mandli Communications, and UW-Madison
 - CHIPPEWA VALLEY REGIONAL AIRPORT**
Eau Claire, WI

- PROPOSED AV CORRIDORS**
- MadMSP Corridor**
WisDOT, MnDOT
 - Sheboygan to Milwaukee Corridor**
WisDOT
 - Burlington to Milwaukee Corridor**
WisDOT
 - MRCM Corridor**
WisDOT, iDOT, IL Tollway

International
 **SOUTHEAST UNIVERSITY**

Breadth, Complexity, Edge Cases

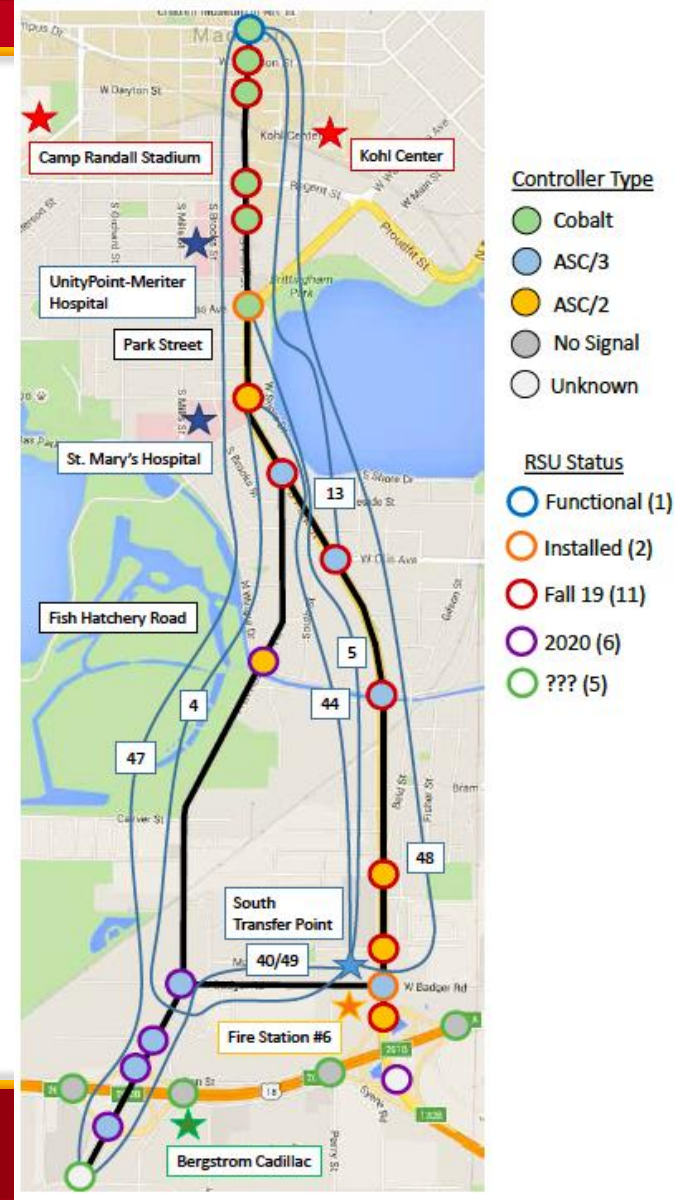

Projects

College of Engineering
UNIVERSITY OF WISCONSIN-MADISON

Madison CV/AV Corridor – Connected Corridor

- Satisfies SPaT (Signal Phasing and Timing) Challenge
- Goal: 26 DSRC deployment
- TSP/MMITSS application
- Transit/VRU interaction apps
- Red light violation warning
- V2I general testing
- Simulation-to-design
- Preparation for 5G

Madison CV/AV Corridor – Connected Corridor

Reliability of Connected Vehicles Messages in DSRC Connected Environments

- Delivery range & quality of CV Messages
- N Park St & University Ave, Madison
- RSU transmitting SPaT and MAP messages
- Mobile OBU for measurements
- 40+ locations
- Range up to 284 meters, without obstructions
- Obstructions impact reception

Mobile AdHoc Networks for Vulnerable Road User Safety

- Infrastructure-free
- Smartphones in adhoc networks
- Broadcast presence messages
- Pedestrian crossing prediction
- Hierarchical mapping of conflicts
- Warning message to road users

Truck Platooning – Sign Occlusion

- Platooning beneficial
 - Fuel consumption
 - Emissions
 - Capacity
- Platoons occlude signs
- Simulation modeling of occlusion
- Over 400,000 scenarios modeled
- Significant sign occlusion (up to 80%)

HAVI – Human AV Interaction

- Full-scale driving simulation
- Partial automation research
- Driver reengagement
- Disengagement scenarios
- Driver attentiveness / distraction
- ADAS/CV driver notification strategies
- AV interaction with human drivers
- Vehicle assertiveness

Augmented Reality (AR) Traffic Signs

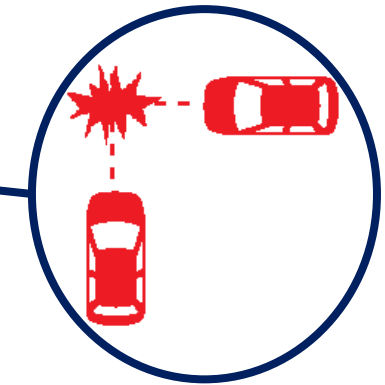

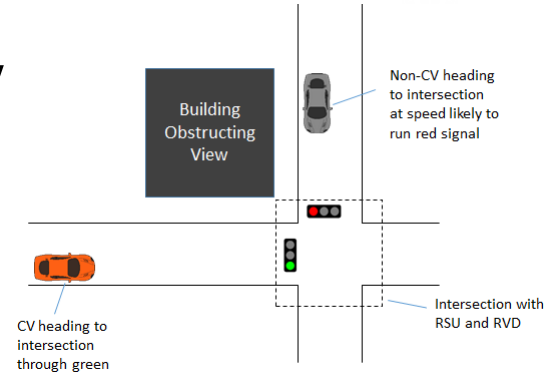

- AR signs
 - Reaction time (RT)
 - Distraction
 - Flashing rate
- Driving simulation scenarios
- AR signs direct attention to road
- Equivalent RT to post-mounted signs
- RT impacted by flashing rate

Communicating Non-CV Info to CV

- Evaluate RLR warning message
- Full-scale driving simulation
- Location of activation of warning system

Integrating AV into Transit Service

- Integrating AV with transit
 - Small urban areas great potential
- Online surveys
 - Travel habits, AV opinion/attitudes, transit usage
 - Eau Claire completed (217 responses)
 - Janesville and Wisconsin Rapids (just completed)
- Welcome automation and ADAS
- Fully automated transit vehicle
 - >75% concerned without operator
 - > 70% comfortable with an operator

REACT – Resident Engagement on Automated and Connected Technologies

- Rural engagement workshops
- Aging community outreach
- Low-income community outreach
- Users with disabilities
- Vulnerable industry sector research
- Public outreach and education events
- Multidisciplinary graduate degree development

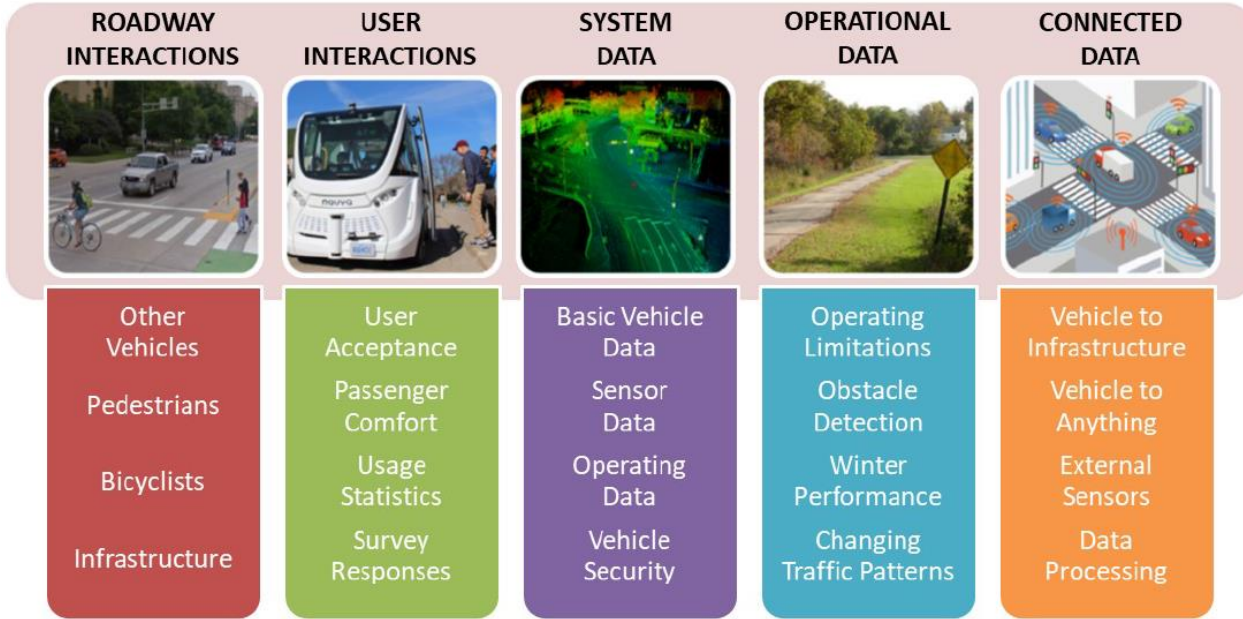

Where are we going?

SC&C – Smart and Connected Communities

- Dynamic routing
- First-mile/last-mile connectivity
- Food and transit deserts
- Shared Madison data platform
- Smart parking algorithms
- IoT compatibility
- Urban analytics

Automated Shuttle Deployment

Closed Course

Living Lab

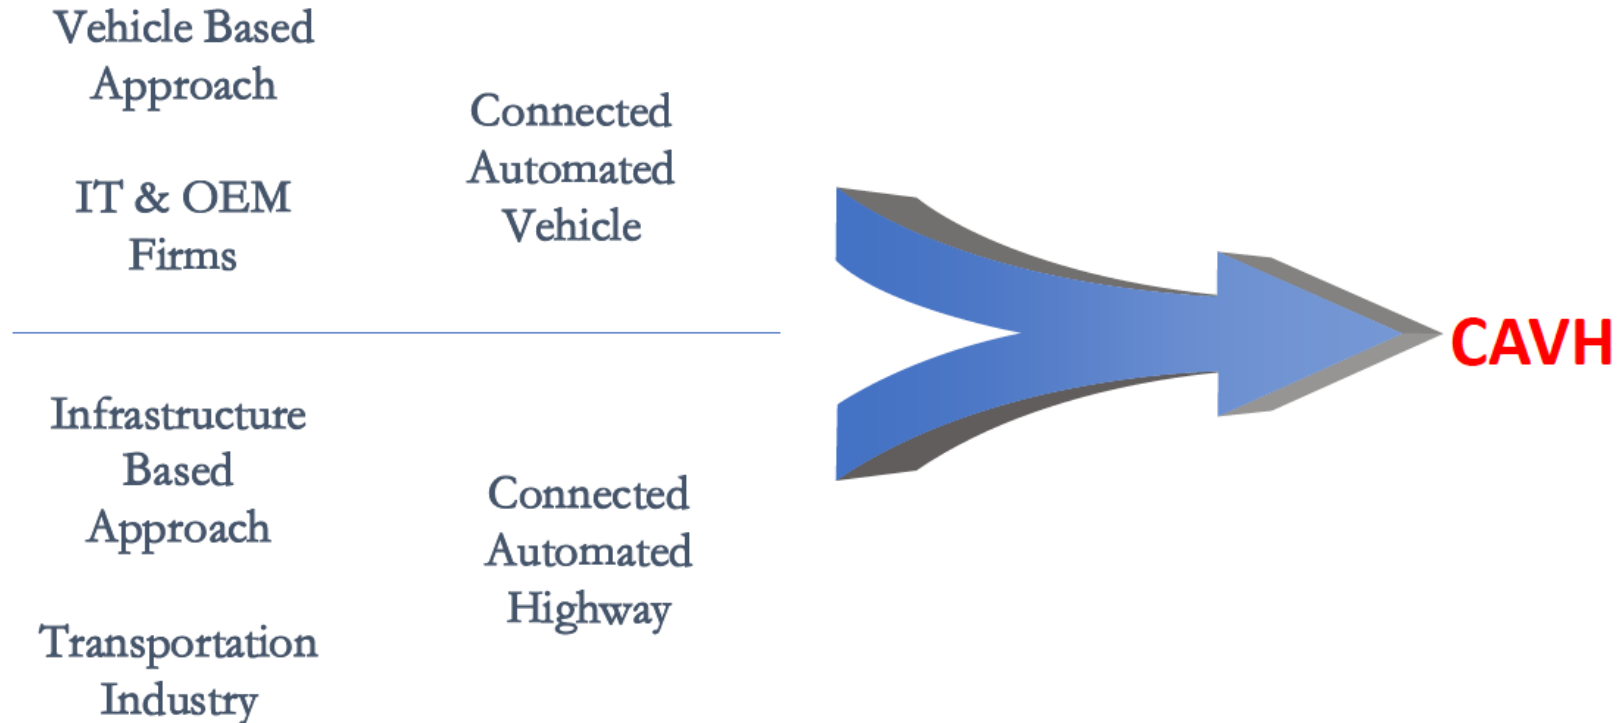

On-Road Demonstrations
College Campus First/Last Mile

Tribal /Rural

Simulation Environment

CAVH

Development Directions of CAVH

System Based Approach: Simple Vehicle , Smart System (Simple Vehicle , Smart Road)

Technical Features :

- ❑ The majority of the sensor functions can be achieved using sensor systems on highway infrastructure or vehicle/highway system
- ❑ The majority of the vehicle operation and control functions can be achieved via the cooperation of control systems on highway infrastructure and vehicle
- ❑ Multiple redundant systems for sensor system, computing system, control system, communication system, information safety

Thank You
