MoDOT TMA Crashes

What is the Goal?

Eliminate operator injuries when the rear protective vehicle is impacted by removing the operator from the vehicle.

Contract with Kratos Defense and Security Solutions

- \$550K – retrofit two MoDOT trucks
 - Partially funded with SPR funds
 - International trucks with MASH TMAs
- No payment until it performs
 - Training, component testing and verification
 - 32 hr. closed road test
 - 250 hr. live work zone test

Functionality

What It Can Do:

- Leader-Follower system
- Follow at distances up to 1500'
- Pause and catch up
- Function in short duration GPS denied environments
- Provide redundant, secure communication link
- Arrow board and turn signals synced

What It Can't Do:

- Platoon to project at highway speeds
- Follow through signals and intersections
- Laterally offset from the lead vehicle

32 Hour Testing

April/May 2019

- State Fairgrounds
- V2V dropouts – *MoDOT retrofit issue*
- Radar timeout E-STOP - *sky data issue*
- Entering Dead Reckoning too often – *satellite issue*
- Veered off course - *excessive CPU usage*
- Follow distance accuracy - *hardware issue*
- Delayed E-STOP – *excessive CPU usage*
- Lateral accuracy issue – *code issue*

250 Hour Testing

June 2019

- Live work zones
- Location accuracy issues driving under bridges
- GPS degradation/DR/follow accuracy issues

Kratos Solutions:

- GPS card upgrade – 2.5 X satellites
- GPS antennae upgrade - amplification
- Roof mounted warning LIDAR

STAND UP ↑
FOR SAFETY

TTS-Modot
Connected vehicle
Project

Data Sharing

- TTS - information service provider for connected vehicle applications
- 2018 - agreement executed – provides no cost, data sharing platform for data innovation
- 2019 - TTS deployment

Relationships

Suppliers own data

Provide real time signal data, as built drawings and signal timing plans

Partners deliver the data

from ATMS, based on TTS' API

TTS delivers the product

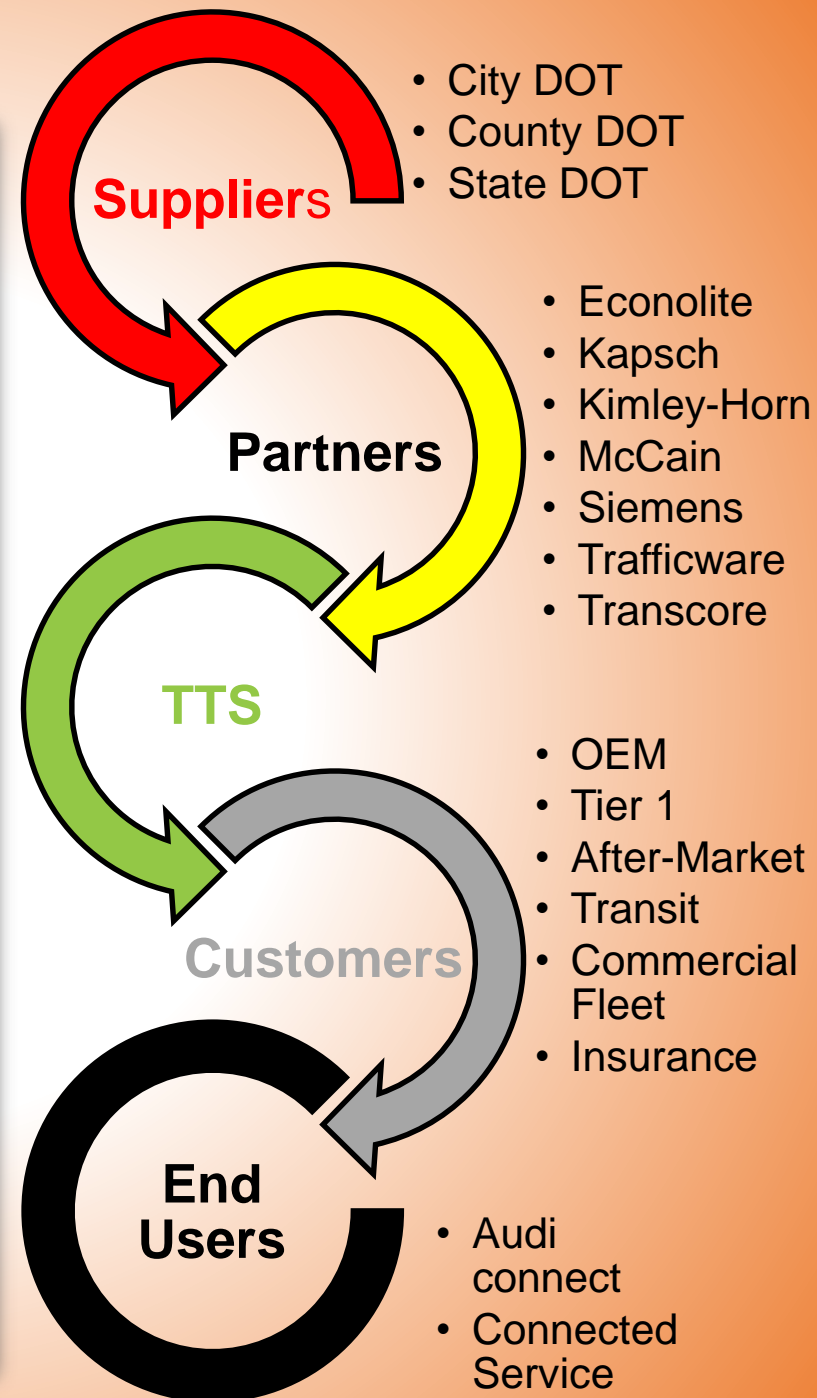

connects the systems, develops the information, maintains systems, provides support

Customers integrate the product

develop connected vehicle applications

End users value the product

Consumers of the applications

St. Louis District

Signal System: TransCore TransSuite TCS

Release Date: Q3 2019

Number of MoDOT Signals: 966

681 sending information

150 not emulating/old status

46 free-running

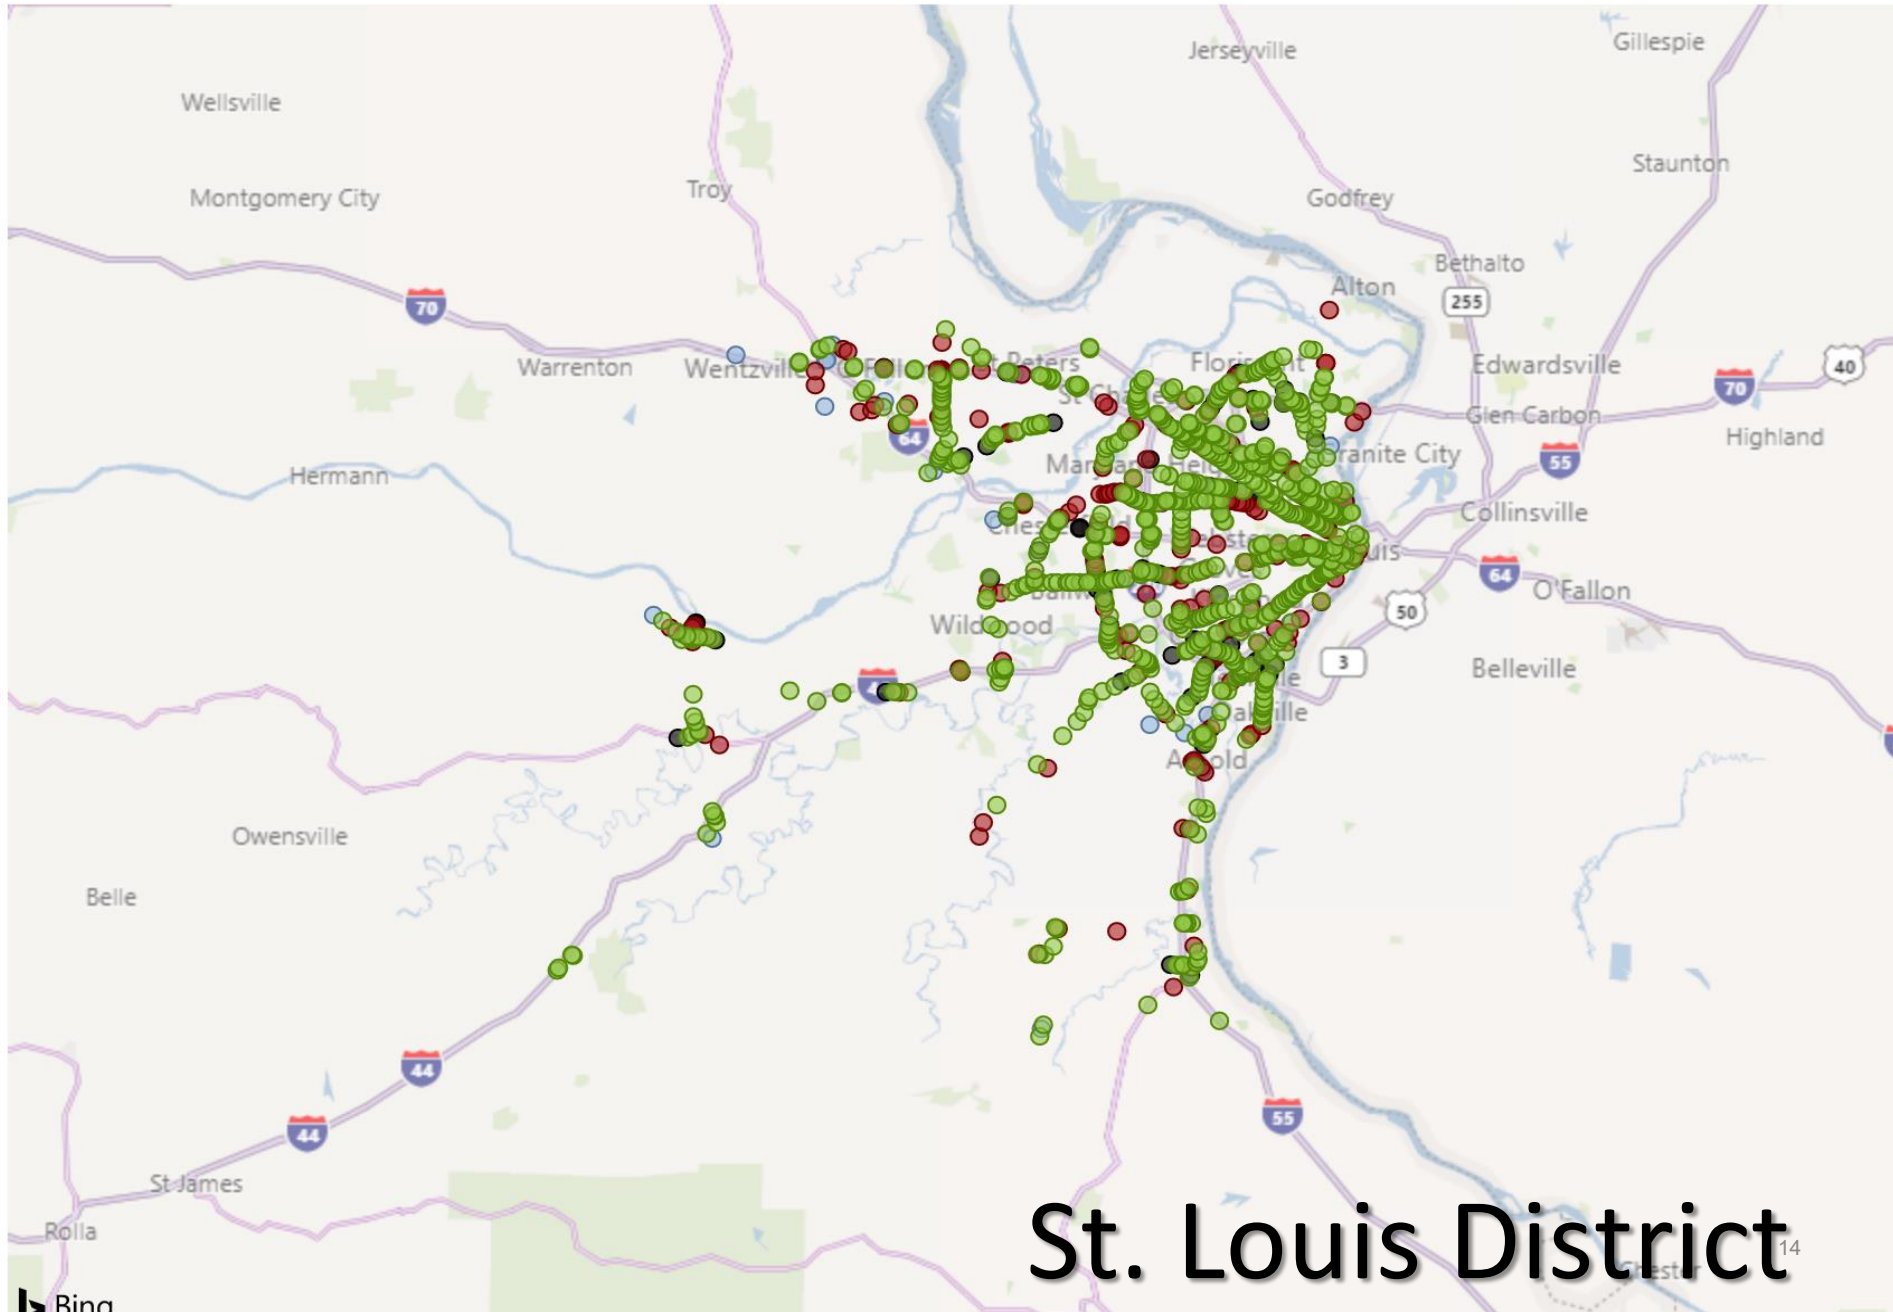

89 preempt

Comments:

Audi of America has released 321 intersections and is releasing signals as they meet the minimum number of crossings and error rates

TTS Product Status

status ● Free Running ● Not Emulating ● Old Status ● Preemption ● Sending SPAT

St. Louis District¹⁴

Kansas City District

Signal System: TransCore TransSuite TCS **Release Date:** Q4 2019

Number of MoDOT Signals: 375

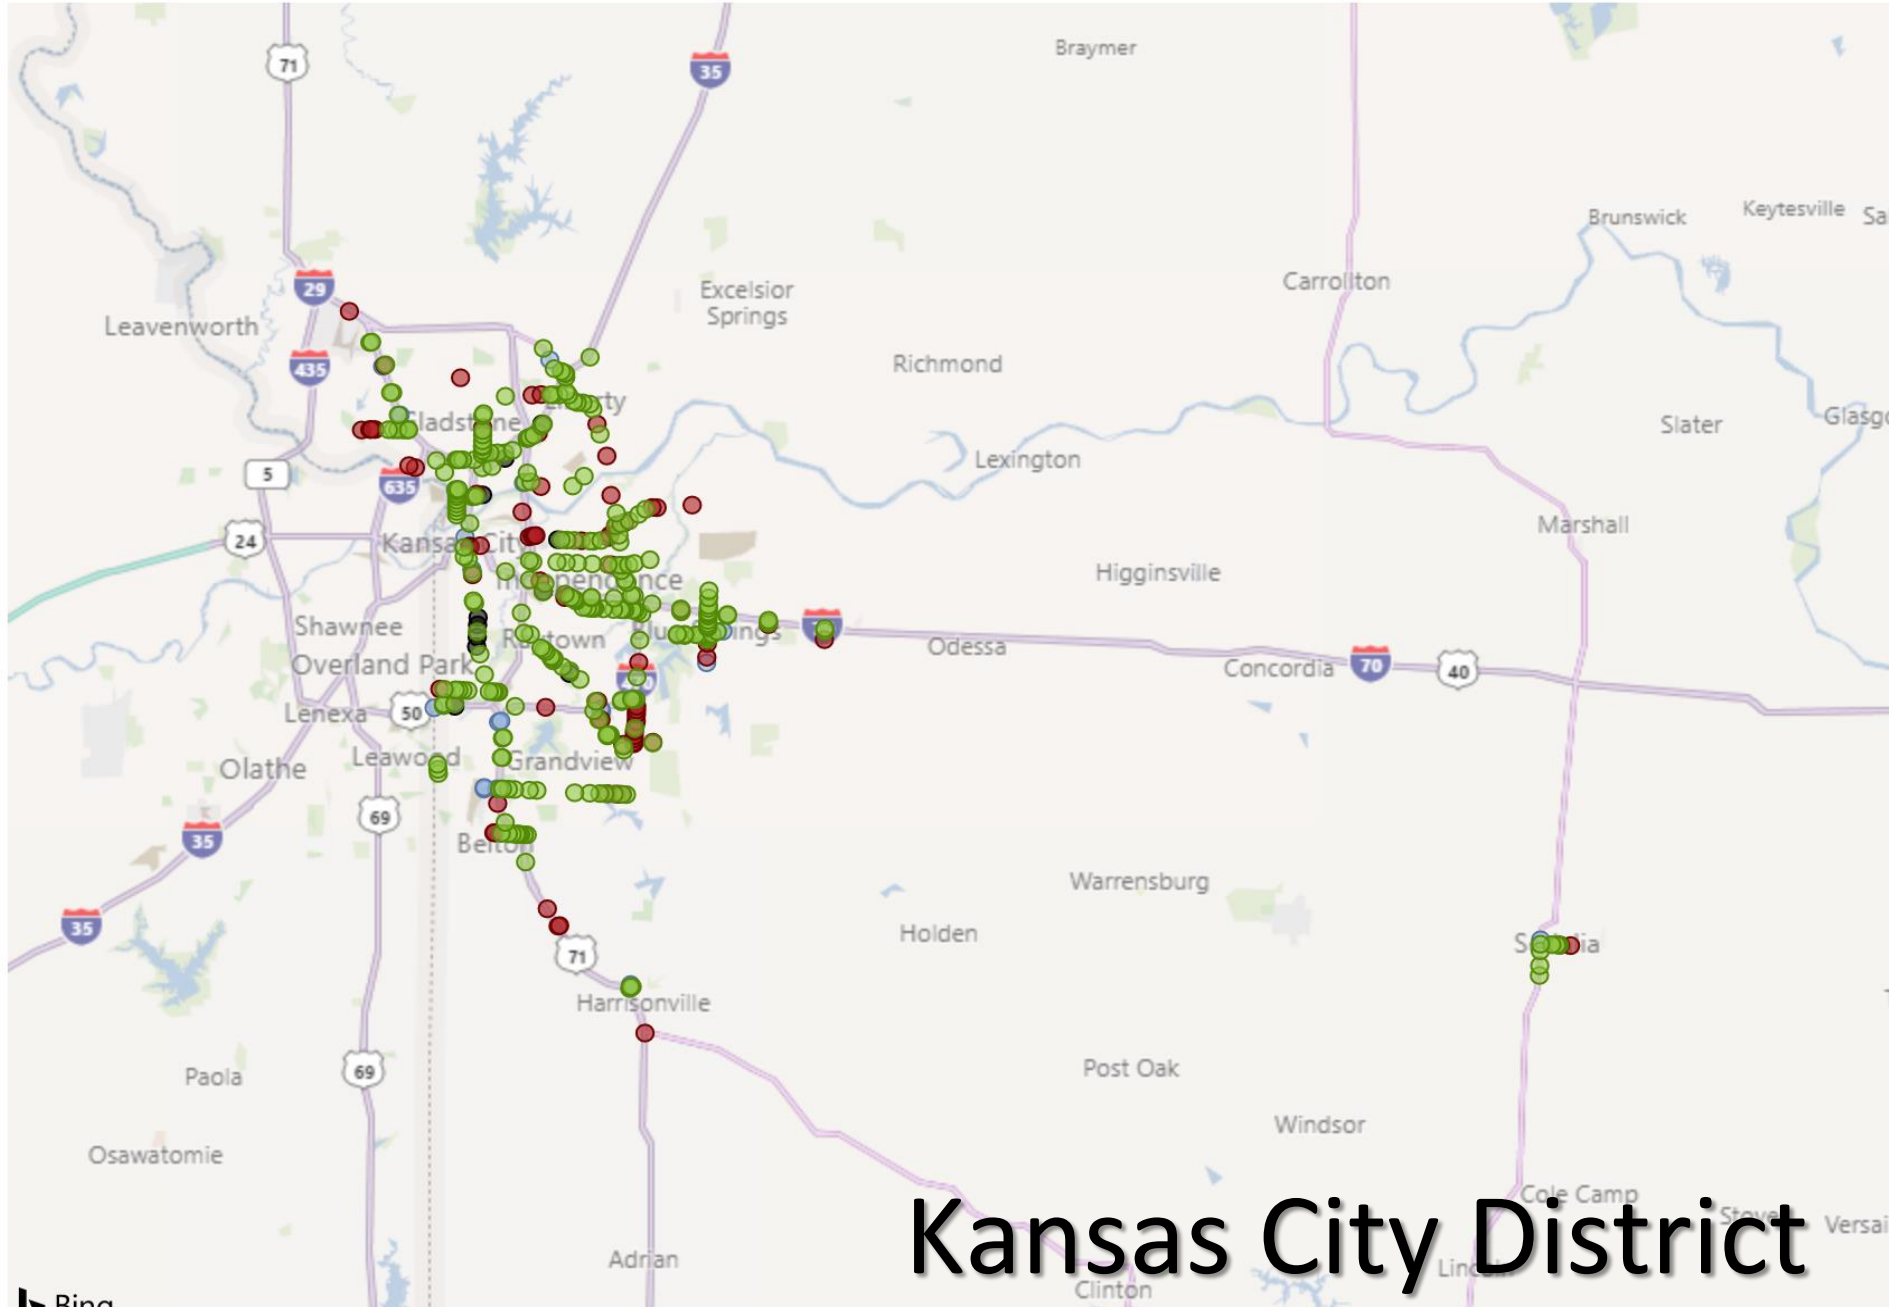

- 264 sending information
- 10 not emulating/old status
- 23 free-running
- 78 preempt

Comments:

TTS has been connecting with MARC and OGL signals, additional agreements with City of Merriam, KS and City of Fairway, KS

TTS Product Status

status ● Free Running ● Not Emulating ● Preemption ● Sending SPAT

Kansas City District

Southwest District

Signal System: McCain Transparency

Release Date: Q2 2020

Number of MoDOT Signals: 157

Comments:

Since the City of Springfield and MoDOT share a signal system, the next step will commence once the City signs their agreement later this year.

What's next

□ **TTS is collecting data to provide dashboards to MoDOT districts**

**Adventures in
Crowdsourcing:
Incident Management Tools**

HAAS Alert/Makeway Pilots

Why these technologies and What are they?

- Alert the driving public of our field crews through crowdsourcing applications (increase awareness, slow down or move over, etc.).
- Equipment installed in our fleet and use of GPS and cloud based solutions.
- When fleet lights are activated a notification gets added to the Waze app. Takes about 30 seconds.

What is the DOT doing and How are we using the technology?

- Pilot in the KC District/KDOT – HAAS Alert
 - MoDOT ER and KDOT/KHP Motorist Assist will have 31 devices.
- Pilot in the SL District – Makeway
 - 18 ER vehicles in the SL area with additional devices slated to be tested on department maintenance vehicles.

HAAS Alert Pilot

- MoDOT Emergency Response - 1 truck
 - Alerted 9,706 drivers
 - 968 Incidents
- In June, July and August (MO side)
 - 68,760 drivers were alerted via WAZE

HAAS Alert Pilot

- Monthly Reports for fleet activity.
- On Demand Reports:
 - Spreadsheet with GPS coordinates and speed
 - Number of incidents vehicle responded to
 - Will show when the lights were on or off

Next Steps

HAAS ALERT

- Continue pilots.
 - With possible expansions.
 - Enhancements.
- Evaluate benefits and accuracy.
- Research other technologies.
- Potential statewide deployment.

Long Range Plan

Predictive Analytics

Leveraging predictive analytics generated from CVAV, and those data items produced by cellular network providers, provide benefits to law enforcement, public safety, and other industries and services associated with transportation activity.

Policy

Missouri law does not specifically address the operation of autonomous vehicles.

Platooning

Missouri has a provision in law that prohibits vehicles, including trucks, from following another vehicle any closer than 300 feet.
